

I productise self-serve data platforms — from ingestion to insight — so domain teams ship trusted data products without waiting for a central team. Data product lifecycle, federated governance, discovery marketplace, quality observability. Hands-on from SQL deep-dives to c-suite strategy decks, no handoff required.

WHAT I'M KNOWN FOR

Self-Serve Data Platform

End-to-end infrastructure — ingestion, transformation, data product publishing, and a marketplace for discovery and consumption. Domain teams self-serve without central dependency.

Infrastructure-Enforced Governance

Column-level security, architectural constraints, and data quality observability baked into the platform. Compliance through code, not policy documents.

Evidence-Led Platform Strategy

Analytical frameworks, cost analysis, and behavioural analytics that shape where leadership invests. From SQL deep-dives to c-suite strategy decks.

EXPERIENCE

OVO Energy · London2024 – Present

Lead Product Manager, Data Platform

Applying data mesh principles — domain ownership, data-as-a-product, self-serve infrastructure, federated governance — to a platform spanning the full data product lifecycle.

- Own the end-to-end self-serve data platform — 23 capabilities across ingestion, transformation, publishing, governance, discovery, and consumption — serving 300+ users across 20+ domain teams.
- Shipped the data product lifecycle: domain teams declare, version, and publish data products via a GitHub registry, with automated distribution to a central BigQuery marketplace and searchable data catalogue.
- Shipped column-level security across 3 EU regions and encoded architectural constraints as platform rules — governance enforced through infrastructure, not documents. Driving v2 with time-based access and data masking.
- Built the data & insight marketplace — data catalogue for discovery and lineage, Looker semantic layer (15+ analysts in upskilling programme), and MCP servers enabling AI agents to query governed data safely — backed by data quality observability (freshness, volume, schema, custom assertions).
- Led cost analysis identifying 50%+ preventable compute; designed remediation at scale. Authored investment case for an agentic data engine — autonomous agents across all four pillars, shifting from OPEX to depreciable CAPEX.

OVO Energy · LondonJan 2023 – 2024

Senior Product Manager, Core Platform

- Architected modular API service layer for Customer, Orders, and Contracts, enabling 40+ teams to ship 40% faster.
- Reduced customer complaints by 30% through GenAI root-cause tooling and Salesforce-to-BigQuery pipelines.
- Automated NPS triggers, increasing survey coverage from 20% to 75% (150K additional surveys annually).

LoveCrafts · PM, Search & Discovery2022UChicago Booth · Asst. Director, Digital PM2021 – 2022
Algolia MVP → 15% CTR lift. Re-platformed search with zero SEO impact.Scaled predictive targeting to global. Led first Hadoop data warehouse.

NSF i-Corps · Entrepreneur Lead2020EF Education First · HR Manager, Shanghai2013 – 2019
130+ customer discovery interviews. First pilot contract sold.People systems at scale across 50+ countries. Governance → data governance transfer.

EDUCATION

MA Design & Technologies for Learning · University of Michigan2019 – 2020 · GPA 4.0

BA Italian Language & Literature · Shanghai International Studies University2009 – 2013

TOOLKIT

Data Platform: BigQuery, DataHub, Dataform, Analytics Hub, Policy Tags, Looker, LookML, Data Product Publisher Analysis: SQL, Python, Jupyter, Looker Studio GCP: Cloud SQL, Datastream, Pub/Sub, Terraform AI: Claude Code, MCP Servers, LLM Evaluation, Agentic Workflows PM: Jira, Confluence, Miro, Google Slides
