

I turn messy data estates into platforms teams trust and leadership invest in. Governance, discovery, cost optimisation, platform operating model, observability — I cover the full platform lifecycle. Hands-on from SQL deep-dives to c-suite strategy decks, no handoff required.

WHAT I'M KNOWN FOR

Evidence-Based Strategy

I design the analytical frameworks that shape roadmap decisions. Behavioural analytics pipelines, SQL, and evidence packs that reframe where leadership invests.

Data Governance

Governance as infrastructure, not policy documents. Auditable access grants, multi-region replication, taxonomy design — enforcement baked into the platform.

Cost & Capacity

Cost optimisation as an operating model. Observability data into structured insights, validated recommendations. Minimal headcount, maximum impact.

EXPERIENCE

OVO Energy · London2024 – Present

Lead Product Manager, Data Platform

- Defined multi-year platform strategy for senior execs (VP Product & AI, Director of Data & AI) across four pillars: self-serve marketplace, trust & governance, observability & cost, and platform foundation.
- Shipped column-level security across 3 EU regions — the governance foundation for safe AI consumption of sensitive data. Driving v2 with time-based access controls and data masking.
- Led platform-wide cost analysis identifying over 50% of shared compute as preventable. Designed the operating model to remediate at scale with minimal headcount.
- Authored investment case to evolve the platform to an agentic data engine — autonomous agents across all four pillars, shifting from recurring OPEX to depreciable CAPEX.
- Established data trust and quality layers — data product publishing, nomination programme, behavioural analytics — positioning the platform as the governed foundation for AI-first transformation.

OVO Energy · LondonJan 2023 – 2024

Senior Product Manager, Core Platform

- Architected modular API service layer for Customer, Orders, and Contracts, enabling 40+ teams to ship 40% faster.
- Reduced customer complaints by 30% through GenAI root-cause tooling and Salesforce-to-BigQuery pipelines.
- Automated NPS triggers, increasing survey coverage from 20% to 75% (150K additional surveys annually).

LoveCrafts · PM, Search & Discovery2022	UChicago Booth · Asst. Director, Digital PM2021 – 2022
Algolia MVP → 15% CTR lift. Re-platformed search with zero SEO impact.	Scaled predictive targeting to global. Led first Hadoop data warehouse.

NSF i-Corps · Entrepreneur Lead2020	EF Education First · HR Manager, Shanghai2013 – 2019
130+ customer discovery interviews. First pilot contract sold.	People systems at scale across 50+ countries. Governance → data governance transfer.

EDUCATION

MA Design & Technologies for Learning · University of Michigan	2019 – 2020 · GPA 4.0
BA Italian Language & Literature · Shanghai International Studies University	2009 – 2013

TOOLKIT

Data Platform: BigQuery, DataHub, Dataform, Analytics Hub, Policy Tags, Looker, LookML Analysis: SQL, Python, Jupyter, Looker Studio GCP: Cloud SQL, Datastream, Pub/Sub, Terraform AI: Claude Code, LLM Evaluation, Agentic Workflows PM: Jira, Confluence, Miro, Google Slides
